

CORPORATE OVERVIEW

Why Secuvy.ai

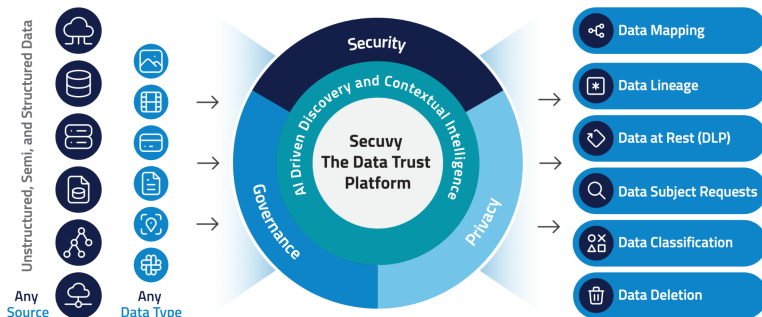

Data leaders need to secure and govern sensitive data, adhere to new and evolving privacy regulations, and build trust with customers by appropriately safeguarding their data.

Massive data growth, particularly unstructured data, makes this challenging in today's increasingly complex, digital, and distributed environments.

Failure to safeguard and comply with regulations can mean millions of dollars in fines and significant brand damage.

The 1st Self-learning AI Platform for Multi-cloud

Secuvy.ai is filling a massive gap with data privacy, security, and governance. While other AI-based solutions require data attributes to be manually specified in scans for data discovery, Secuvy.ai leverages the power of self-learning AI. With contextual intelligence, Secuvy.ai uniquely automates the discovery and classification of *all* and *any* sensitive data, even if the datatype has not yet been introduced into the organization.

ABOUT US

Secuvy.ai is on a mission to secure all sensitive data and protect the privacy of every Data Subject.

AT-A-GLANCE

Year founded: 2019

Headquartered: Pleasanton, CA

Founders:

- Vaibhav Mehrotra (CEO)
- Prashant Sharma (CTO)

Backed by:

- Dell Technologies Capital
- WestWave Capital
- Z5 Capital

BENEFITS

- One Platform: One Source of Truth
- Contextual Data Lineage
- Flexible Deployment: On-prem to Multi-cloud
- Integration Friendly: 400+ connectors
- Immediate ROI: Deploy and Operate in Days

Secuvy.ai Data Security, Privacy, and Governance Use Cases

Dark Data Discovery & Classification	Automated Data Subject Requests
Data Deletion	Data Lineage

Full Coverage of ALL your Data

Secuvy's revolutionary approach enables enterprises to minimize noisy alerts and adapts to each business's unique data signatures in structured, semi-structured, and unstructured environments. The Data Trust Platform™ provides:

- One pane of glass to view all of your data
- One security platform to protect your users' data
- One policy engine to apply your data security rules everywhere

Its innovative technology helps organizations achieve greater accuracy while saving on cost, time, and reducing errors at significant scale.

"Secuvy.ai was key to our program's success. Prior to Secuvy, manual processes resulted in inaccuracies, duplication, and security concerns that go with managing data.

Secuvy.ai automatically discovers and labels PII and sensitive data in unstructured sources using self-learning AI. We are now able to know where all our legal documents are, what's in them, who created them, who manages them, etc."

- Tom Hines, Director IT Operations and Infrastructure, Mizuho OSI

THE DATA TRUST PLATFORM™

Security. Privacy. Governance.
